

# Five reasons

why you should consider an Omni Chiropractic Table.

## 1. QUALITY

Our mission is to provide chiropractors with products that are built to be unmatched in quality, versatility, adaptability and sheer strength. All of our tables have a maximum drop patient weight of 225kg. No other adjusting table comes close to this, with most only rating to 115kg max.

## 2. ERGONOMIC DESIGN

Chiropractic is all about the good of the patient, the intelligent design of our chiropractic adjustment tables will not only provide the best chiropractic care available, but give you, the chiropractor, added ease and comfort in your patient interactions.

## 3. CUSTOM OPTIONS

Omni Tables come in 3 models: Stationary, Elevation and Flexion Distraction. Each table is modular and can be customised to suit your individual needs (and grow as your practice grows). If you purchase a Stationary table you can upgrade it to an Elevation or Air-Drop Table. The Elevation table provides different height options while the Air-Drop option will save you time and money by providing faster adjusting times with less wear and tear upon the practitioner.

## 4. DECORATOR COLOURS

All Omni Tables are upholstered using the comprehensive collection of Vowalon vinyls, these are tried-and-tested fabrics that combine beauty and performance, providing the ultimate resistance to stains, abrasion, flame and mildew. When it comes to ecological factors, our product conforms to the Ökotex standard 100 product class 1 and class 11 test (the highest level attainable). Making this product the safest for direct contact with human skin and completely baby safe. This item has a percentage of renewables also making it one of the best products for our environment and our planets sustainability.

## 5. PIECE OF MIND

All Omni Chiropractic Tables are Quality Assured and built using the best manufacturing processes and the highest quality parts and materials. This is why we are able to offer a Lifetime Structural Guarantee on all tables in our range along with a full 2 Year warranty on the springs and a 12 month warranty on motors. We do all this so that you can be confident you have made the right choice for years to come.

## The Anatomy of an Omni Chiropractic Table

### ● Rock Solid Frame

Omni Chiropractic Tables are built 100% in house allowing us to maintain the highest level of quality control. Each table is cut, welded and finished without any castings to produce tables of the most solid construction. Sure it would be quicker and cheaper to use pre-made castings in the manufacturing process, but by cutting and welding we provide you with, what we believe are, the strongest, most durable chiropractic tables available.

### ● Headpiece Flexibility

The headpiece of an Omni Table is an engineering work of art. It offers a wide range of correction including elevation, extension, rotation, side flexion and side translation in any combination simultaneously.

### ● Elevation Engines

No expense is spared in the construction of our motors. Our aluminium casings are cut from one solid billet of aluminium and not from welded castings like others in the marketplace. Our motors run cooler and are one of the strongest and most reliable products available.

*Note: applies to elevation tables only*

### ● Sturdy Tri-Steel Column

Omni Tables offer the only triple column lift in the chiropractic industry - most other brands are only double column. With the triple column lift more of the shaft is left in the column which results in an extremely sturdy and stable working platform and a chiropractic table with a longer working life.

*Note: applies to elevation tables only*

### ● Industrial Strength Upholstery

There are three grades of vinyl in the marketplace, consumer, commercial, and industrial. The consumer grade has a rub cycle of 100,000 to 250,000. The commercial grade has a rub cycle of 250,000 to 500,000 and finally there is the industrial standard with a rub cycle in excess of 500,000. It is only this high grade vinyl which is selected for the Omni Table range.

### ● Superior Support

Rather than using ordinary foam, Omni Tables incorporate a dual density system of rebound foam for each table top. The bottom layer is a 5kg rebound foam which is 25mm thick. On top of this we place another layer of 48mm poly foam. The rebound foam is the best material you can use for a chiropractic table and this dual layer system offers the ultimate combination of patient comfort and support.

## sturdy, versatile and fully customisable.

Our range of ergonomic adjustable tables are specifically designed to accommodate all ranges of spinal correction, flexion, extension and rotation.
